Online Photography Portfolio

Web Technologies Lab · Output Screenshots (Week 1 to Week 14)

Week 1	Static web pages: Home Page, Login Page
Week 2	Registration Page using HTML forms with basic input validations
Week 3	Internal, external and inline CSS applied to Week 1 and Week 2 pages
Week 4	JavaScript validation of the registration page fields
Week 5	Catalogue page using HTML, CSS and JavaScript
Week 6	XML file displaying the information, validated with a DTD
Week 7	Review and Skill Test-1 (no program output)
Week 8	Ajax / Fetch API program to load text data asynchronously
Week 9	Ajax / Fetch API program to parse JSON/XML response data
Week 10	Ajax / Fetch program to send data using the POST method
Week 11	TypeScript program using an interface, a class and a function
Week 12	Angular components with data binding and directives
Week 13-14	Angular forms, routing and services in a single-page application

Week 1 — Static Web Pages

Develop the static web pages required for the web site: Home Page, Login Page.

Output 1.1: Home page (home.html)

Online Photography Portfolio

Welcome to My Photography Portfolio

Welcome to my online photography portfolio. Explore different types of photography and beautiful moments.

Photography Categories

- Nature Photography
- Wildlife Photography
- Portrait Photography
- Travel Photography

About Photography

Photography is the art of capturing beautiful moments, people, places and nature through images.

Week 1 — Static Web Pages

Output 1.2: Login page (login.html)

Online Photography Portfolio

Capturing moments, one frame at a time.

Login

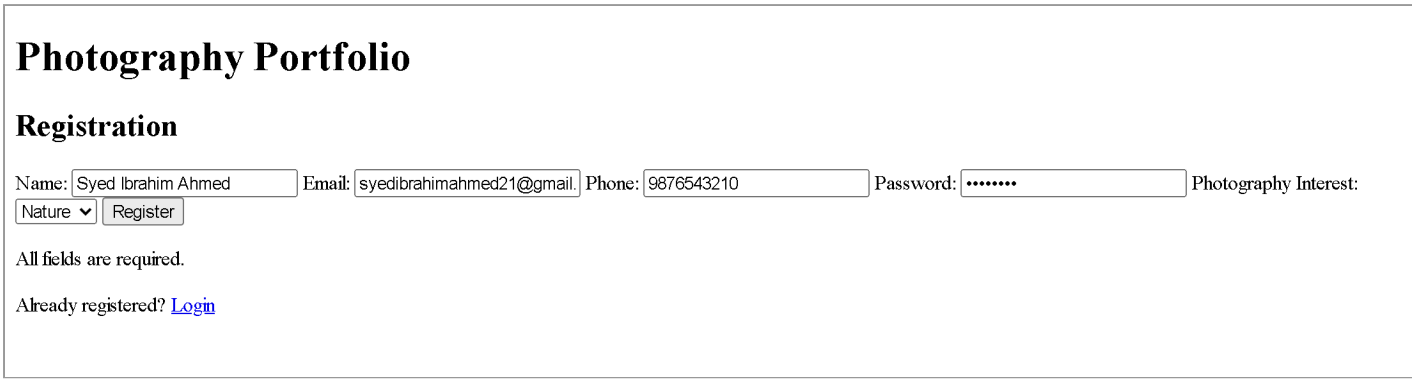

Email: Password: Login

Don't have an account? Register

Week 2 — Registration Page

Create the Registration Page using HTML forms with basic input validations.

Output 2.1: Registration form with sample data (register.html)

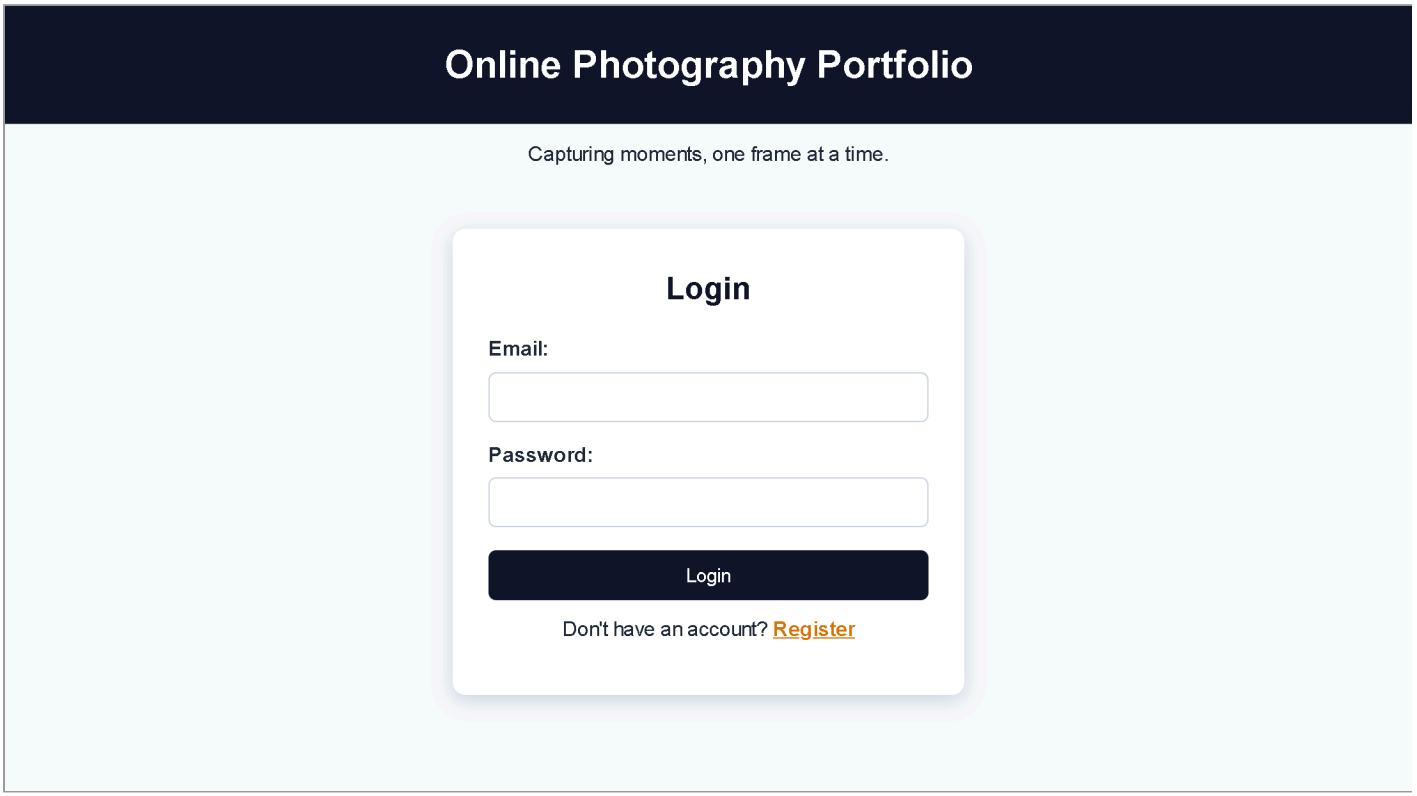

Week 3 — CSS Styling

Apply internal, external and inline CSS for the Week 1 and Week 2 pages.

Output 3.1: External CSS only — login page linked to week_3/style.css

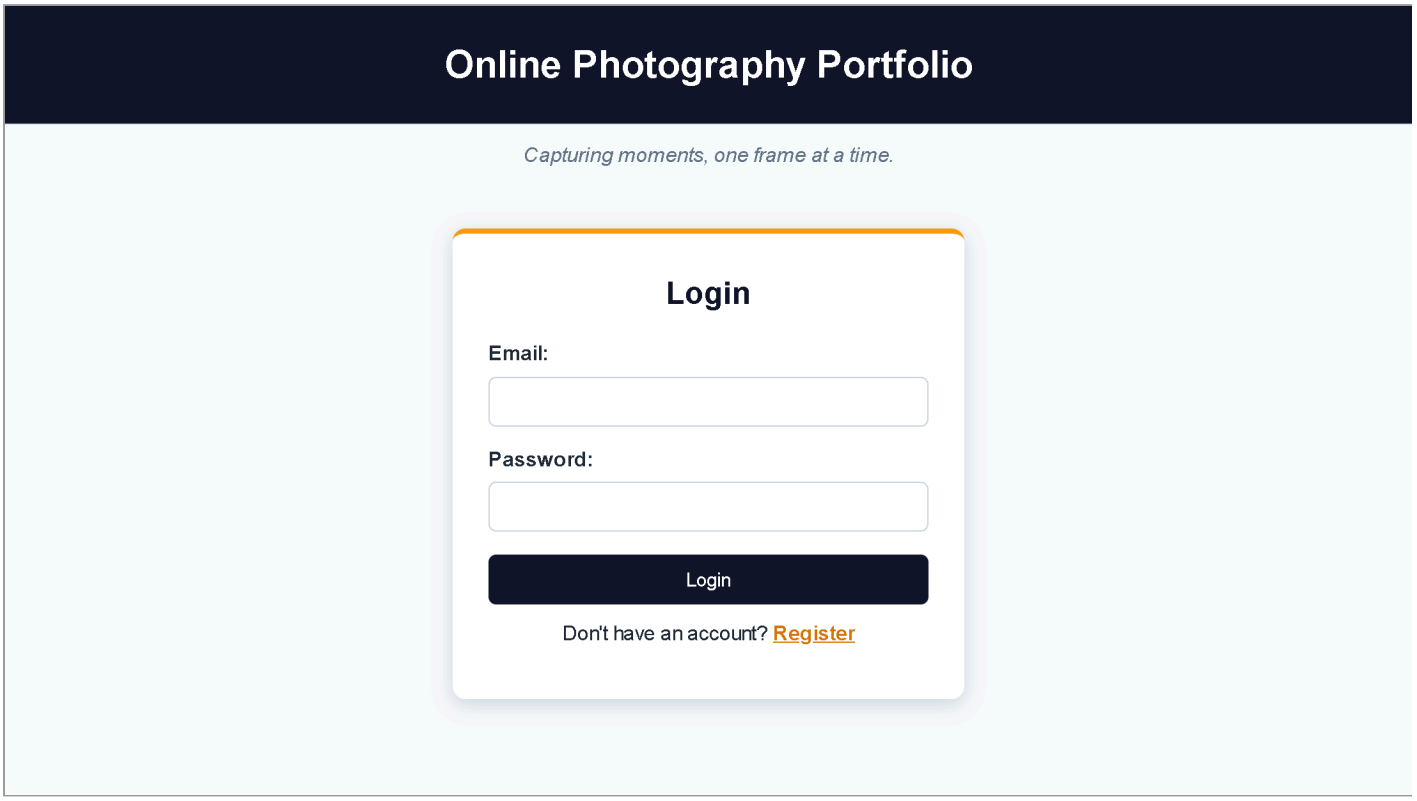

Source: <link rel="stylesheet" href="../week_3/style.css">. It supplies the whole theme — page background, heading bar, form card, input and button styles. The login card has no coloured top border yet and the tagline is plain black.

Week 3 — CSS Styling

Output 3.2: Internal CSS added — the <style> block inside the page head

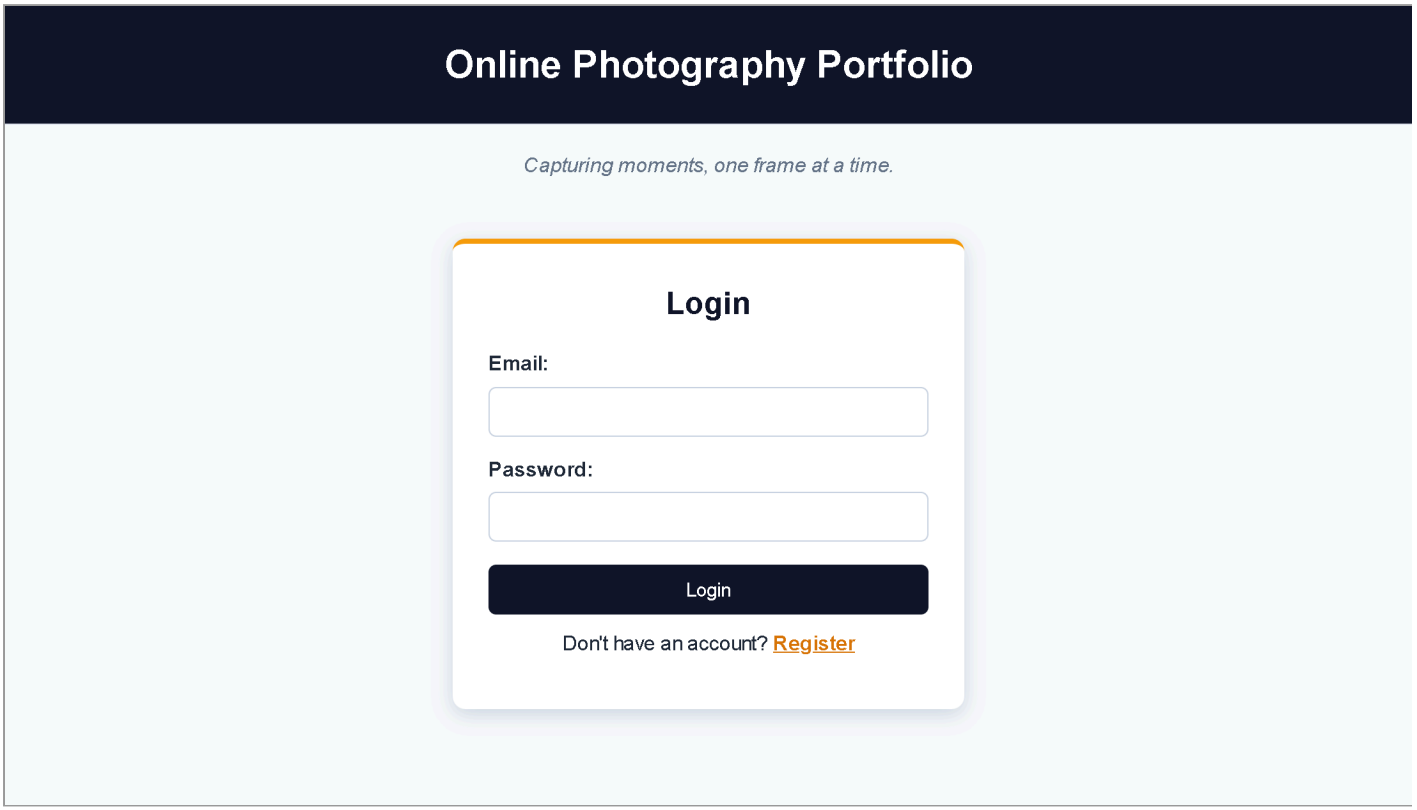

Source: <style> .login-container { border-top: 4px solid #f59e0b; } .tagline { color: #64748b; font-style: italic; } </style>. Effect: the amber top border on the login card and the grey italic tagline.

Week 3 — CSS Styling

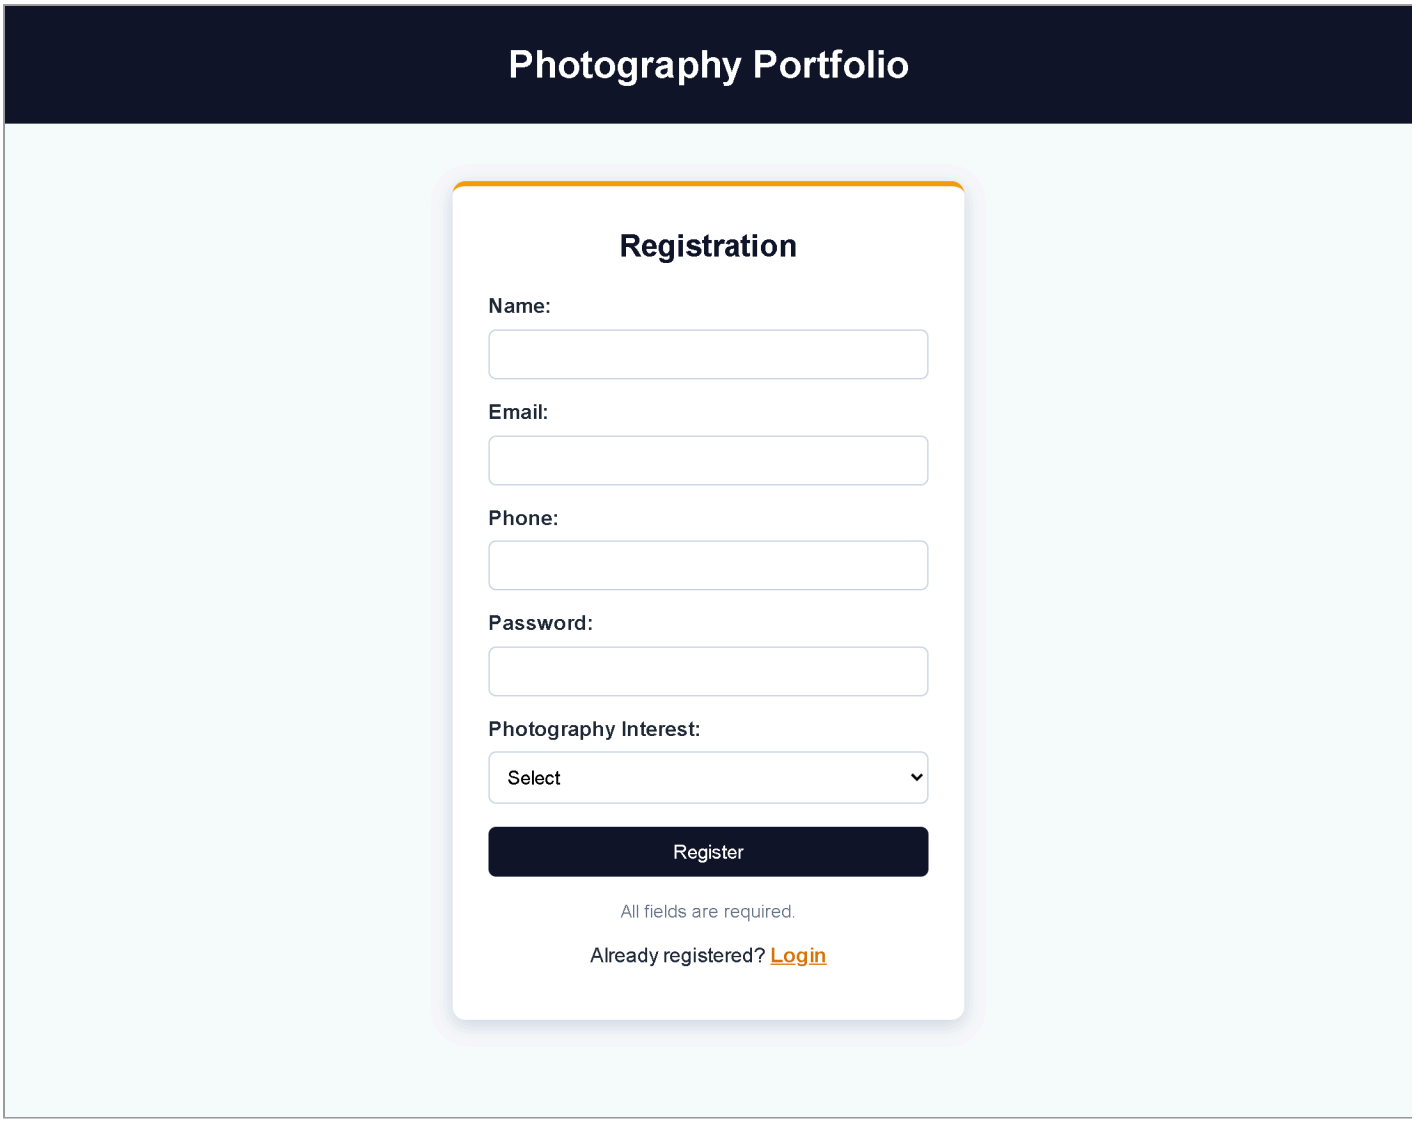

Output 3.3: Inline CSS added — style attribute written on the element itself

Source: <p class="tagline" style="margin-top: 18px;">. Effect: extra spacing above the tagline. Being inline, it has the highest priority of the three.

Week 3 — CSS Styling

Output 3.4: The same three types of CSS applied to the Week 2 registration page

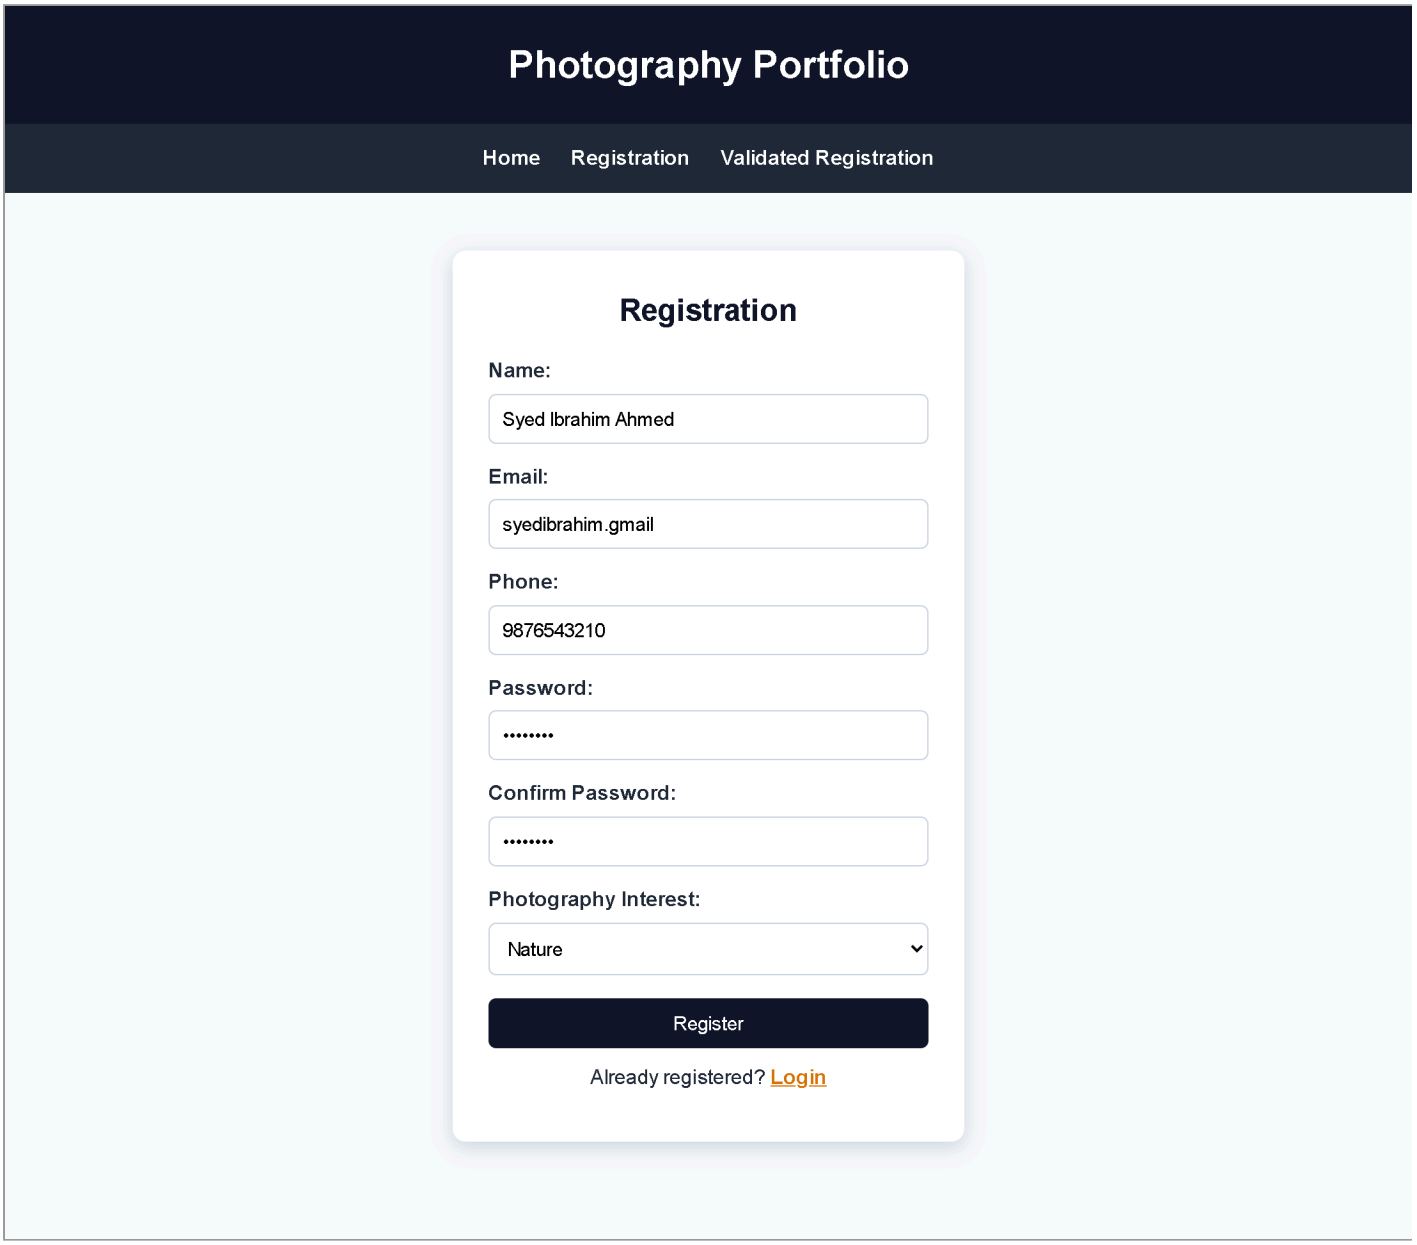

Week 4 — JavaScript Validation

Write JavaScript programs to validate the fields of the registration page.

Output 4.1: Invalid e-mail address entered (syedibrahim.gmail) and Register clicked

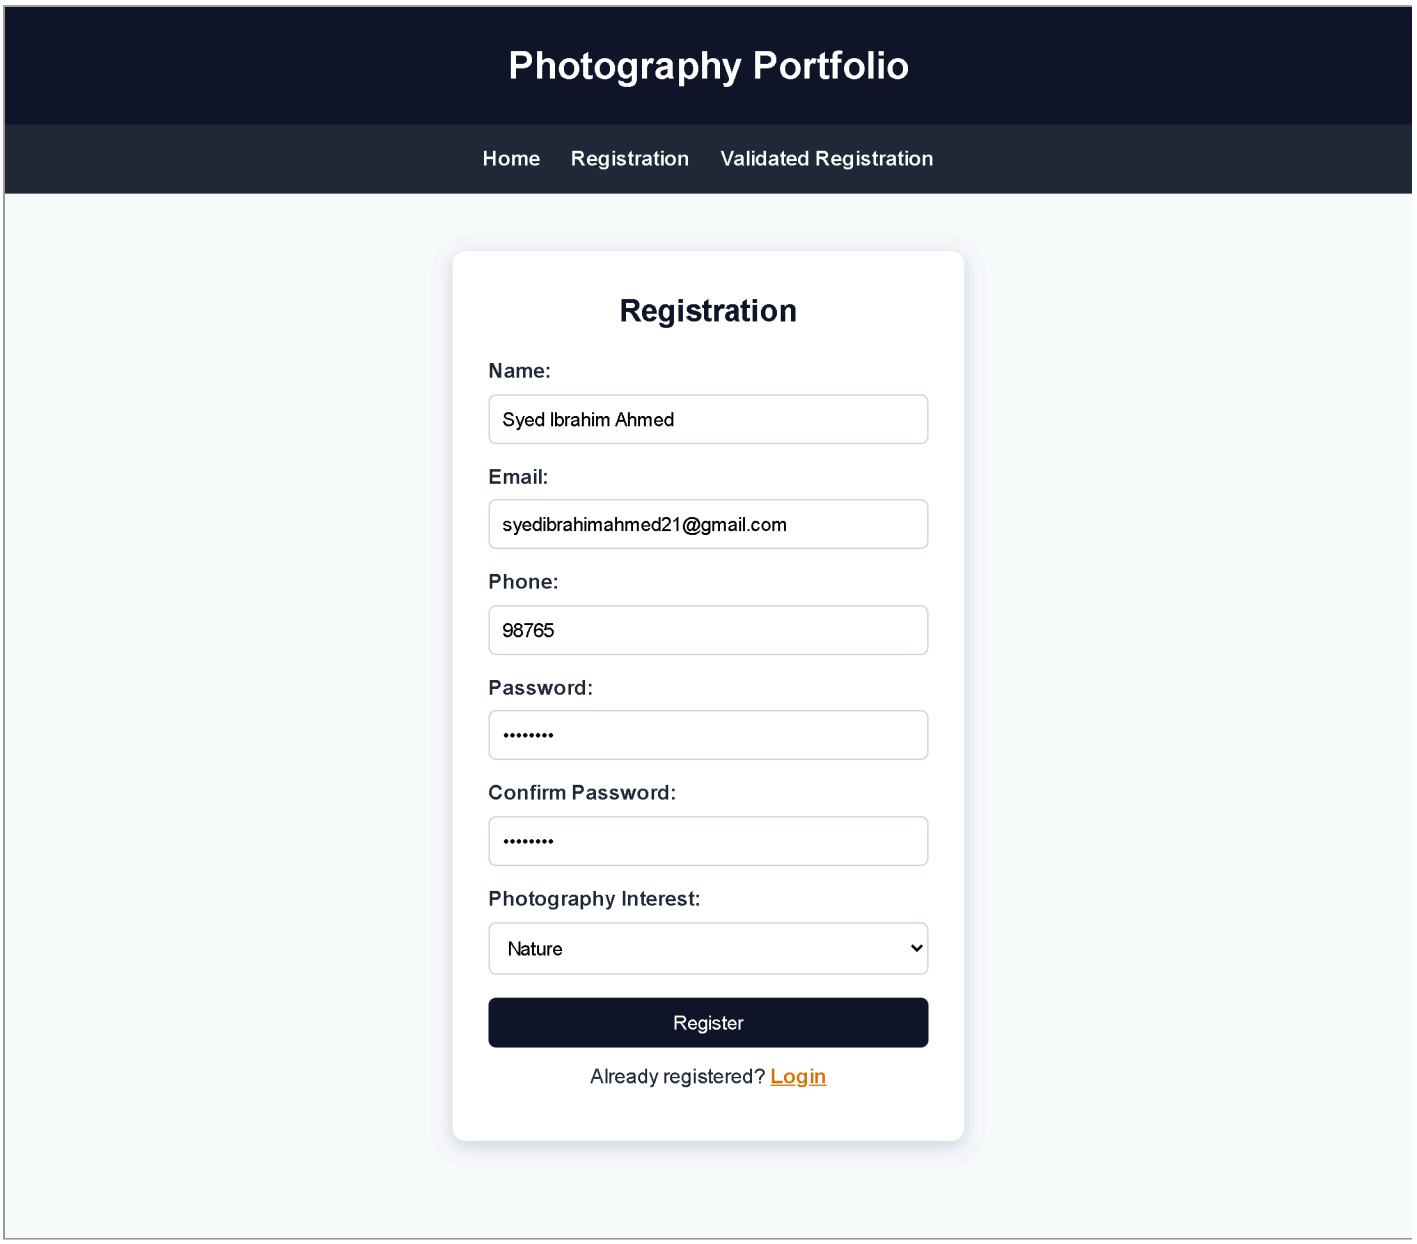

Alert message displayed by the browser: “Please enter a valid email address” — the form is not submitted.

Week 4 — JavaScript Validation

Output 4.2: Phone number of only 5 digits entered (98765) and Register clicked

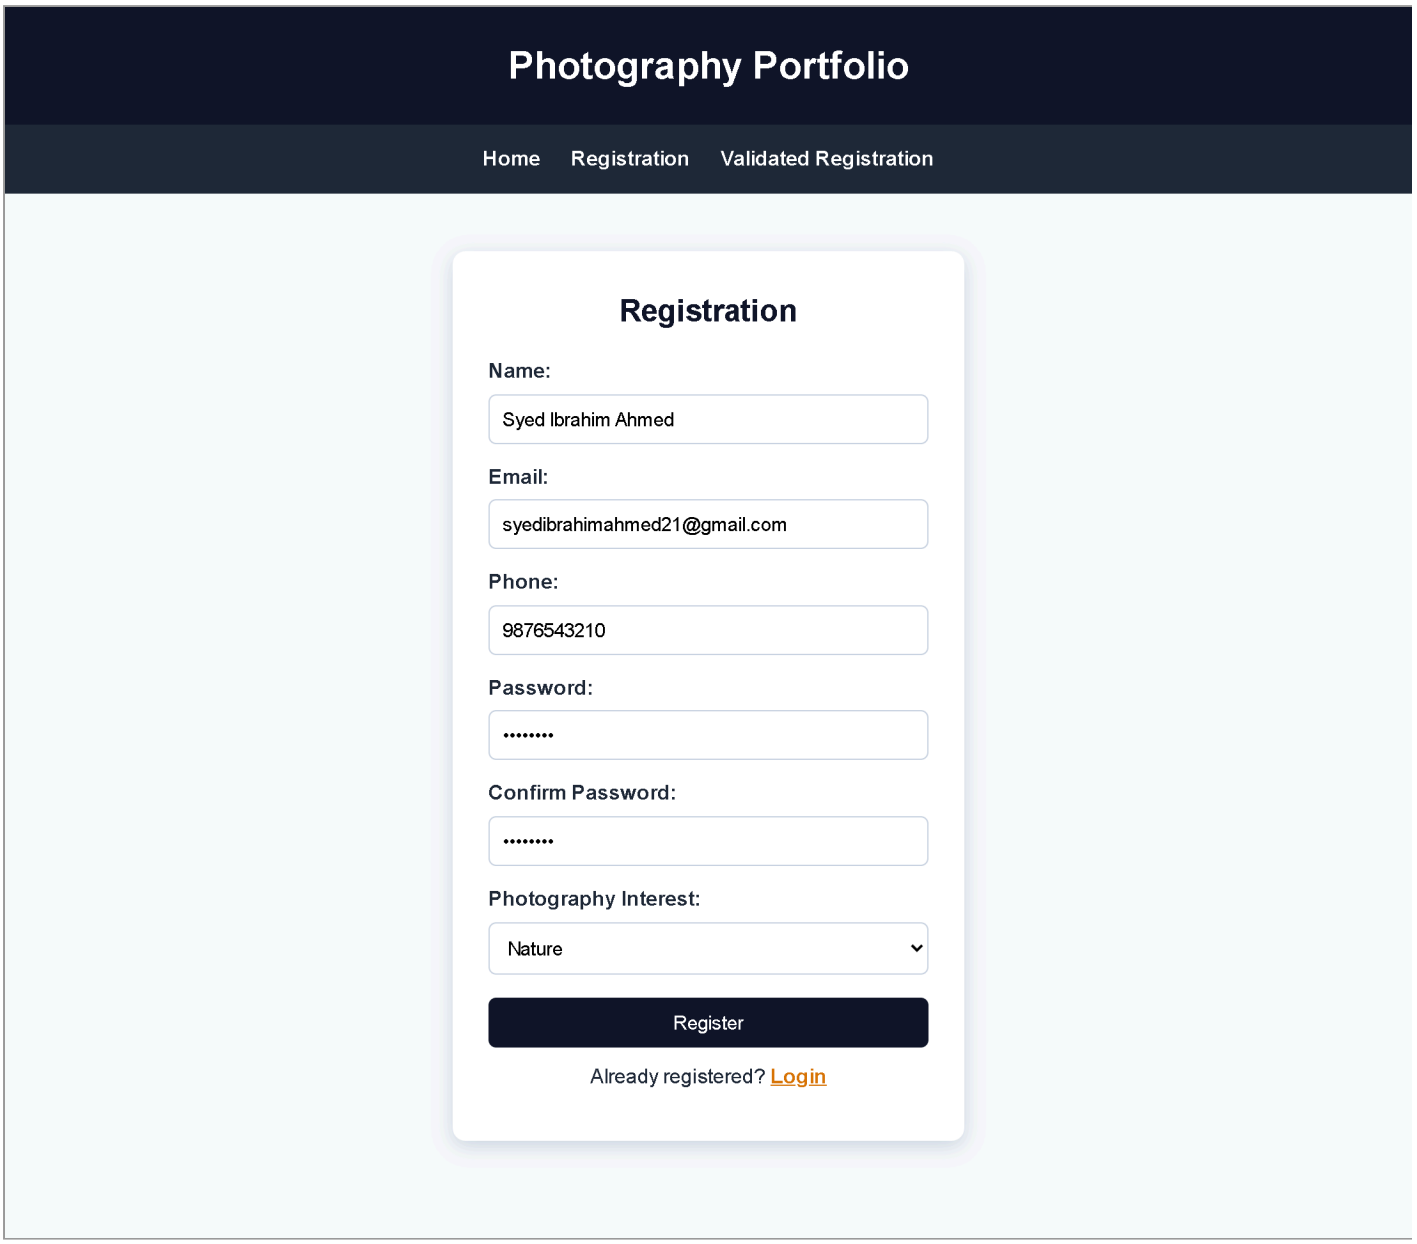

Alert message displayed by the browser: “Phone number must contain 10 digits” — the form is not submitted.

Week 4 — JavaScript Validation

Output 4.3: Password and Confirm Password do not match, Register clicked

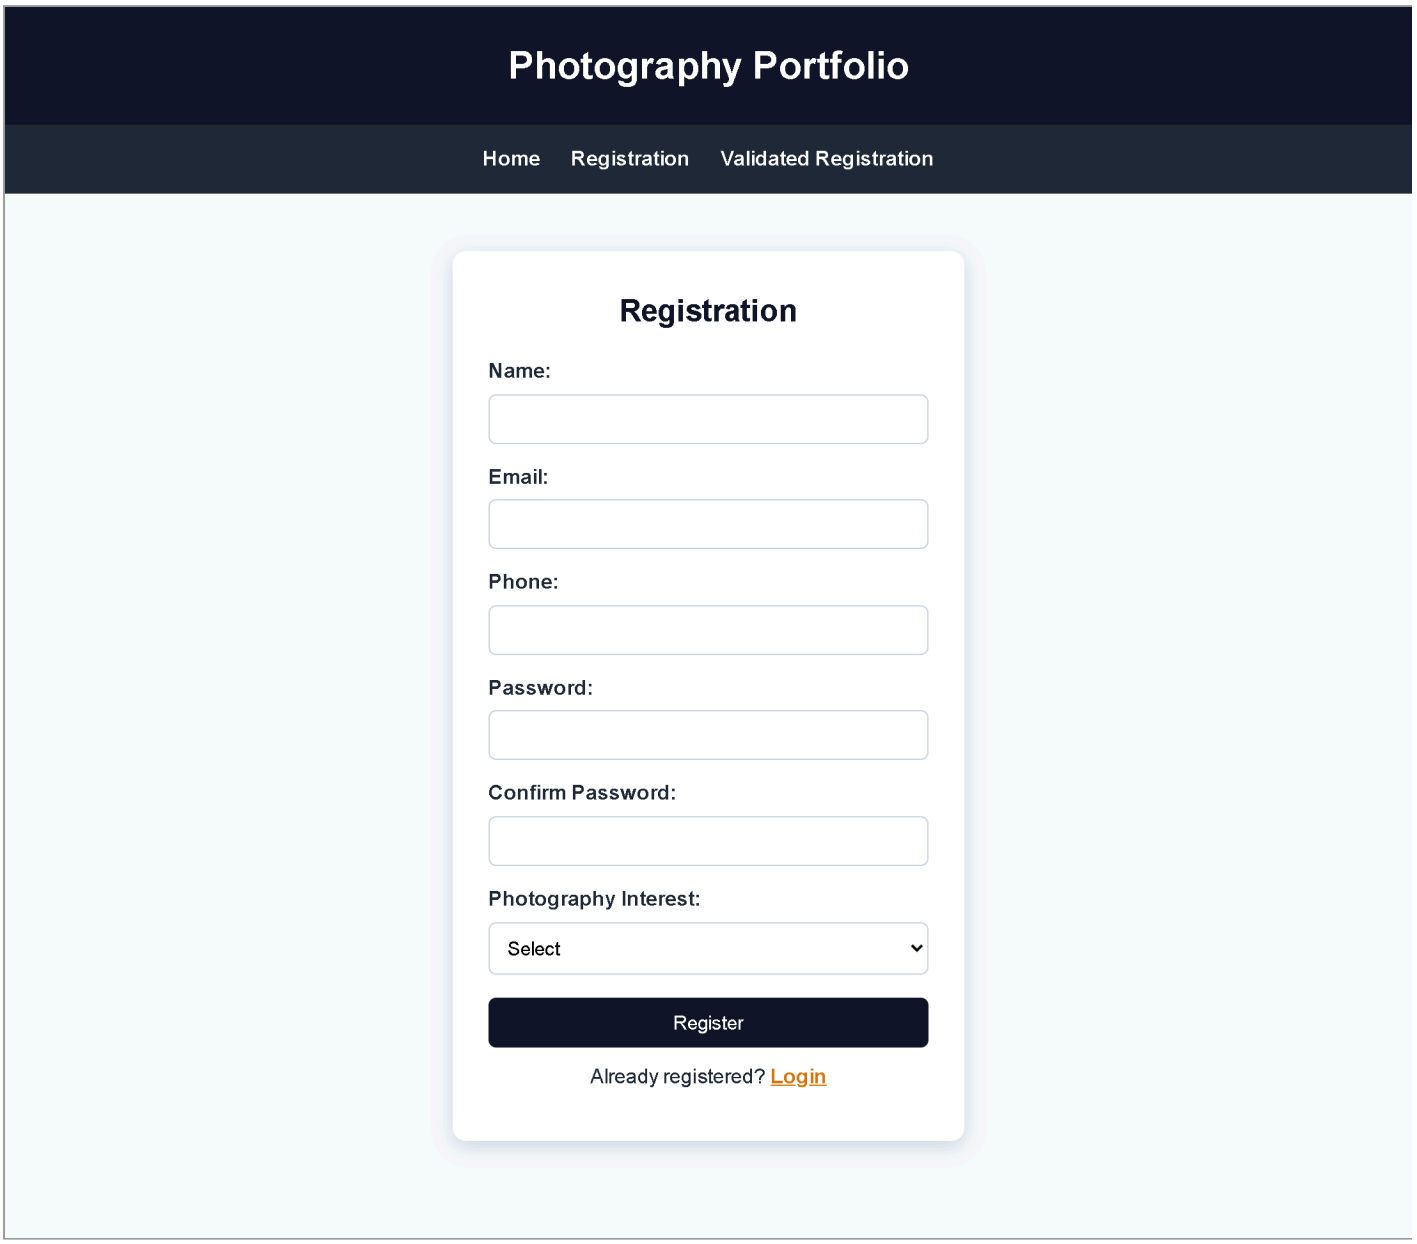

Alert message displayed by the browser: “Passwords do not match” — the form is not submitted.

Week 4 — JavaScript Validation

Output 4.4: All fields valid, Register clicked

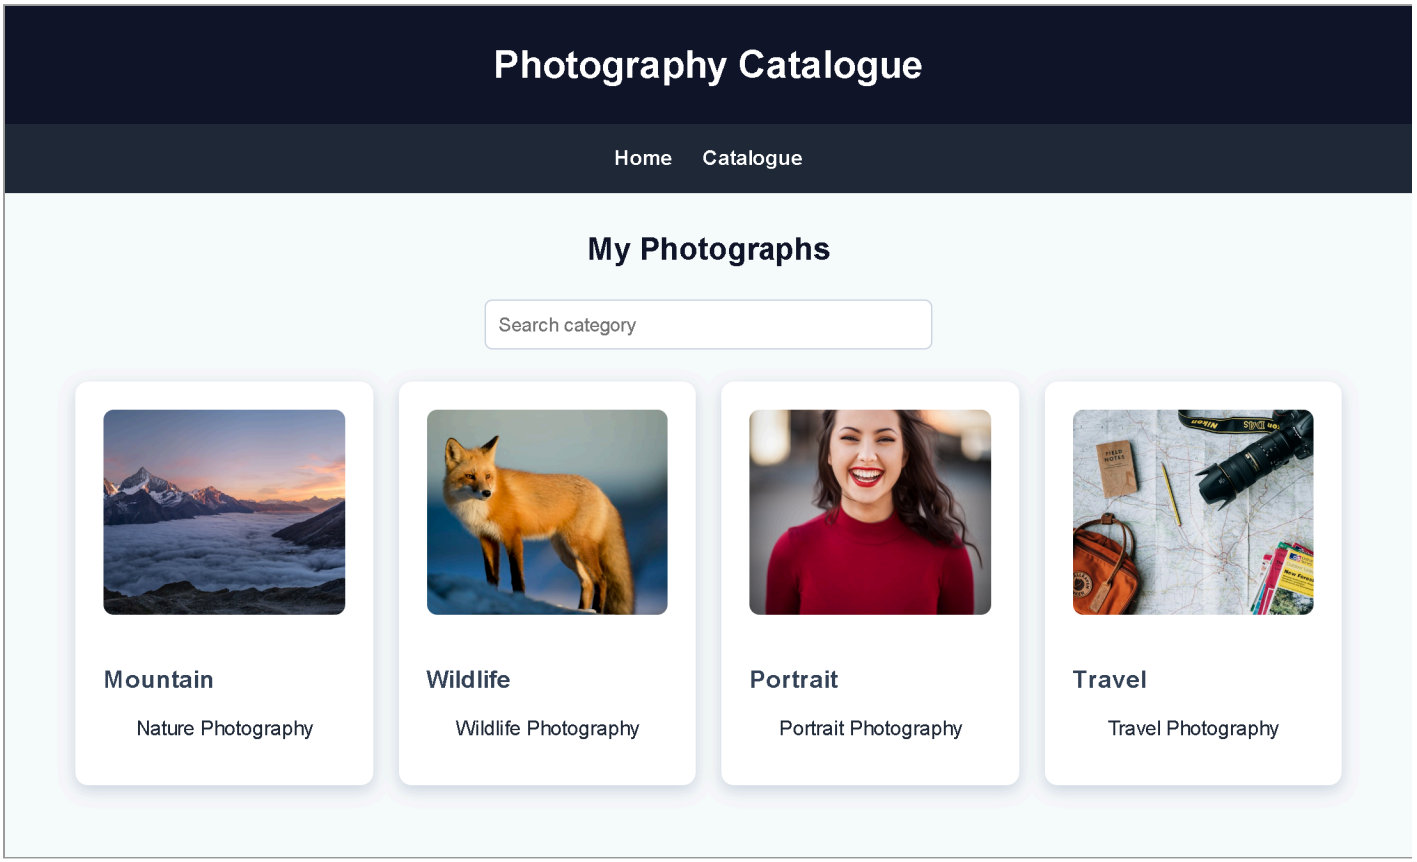

Alert message displayed by the browser: “Registration successful” — the form is submitted.

Week 5 — Catalogue Page

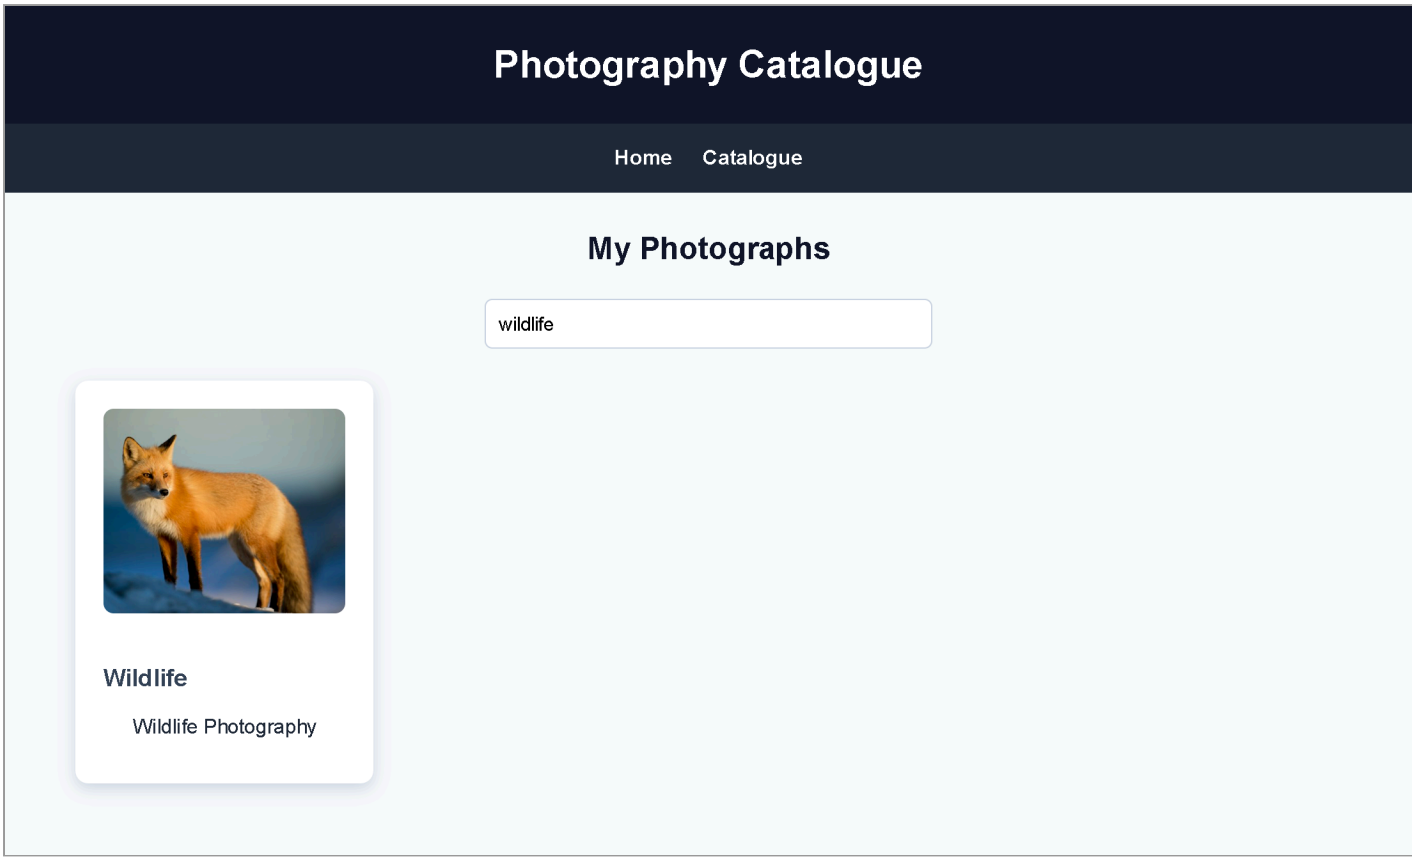

Design the catalogue page using HTML, CSS and JavaScript.

Output 5.1: Catalogue page with all photograph categories (catalogue.html)

Week 5 — Catalogue Page

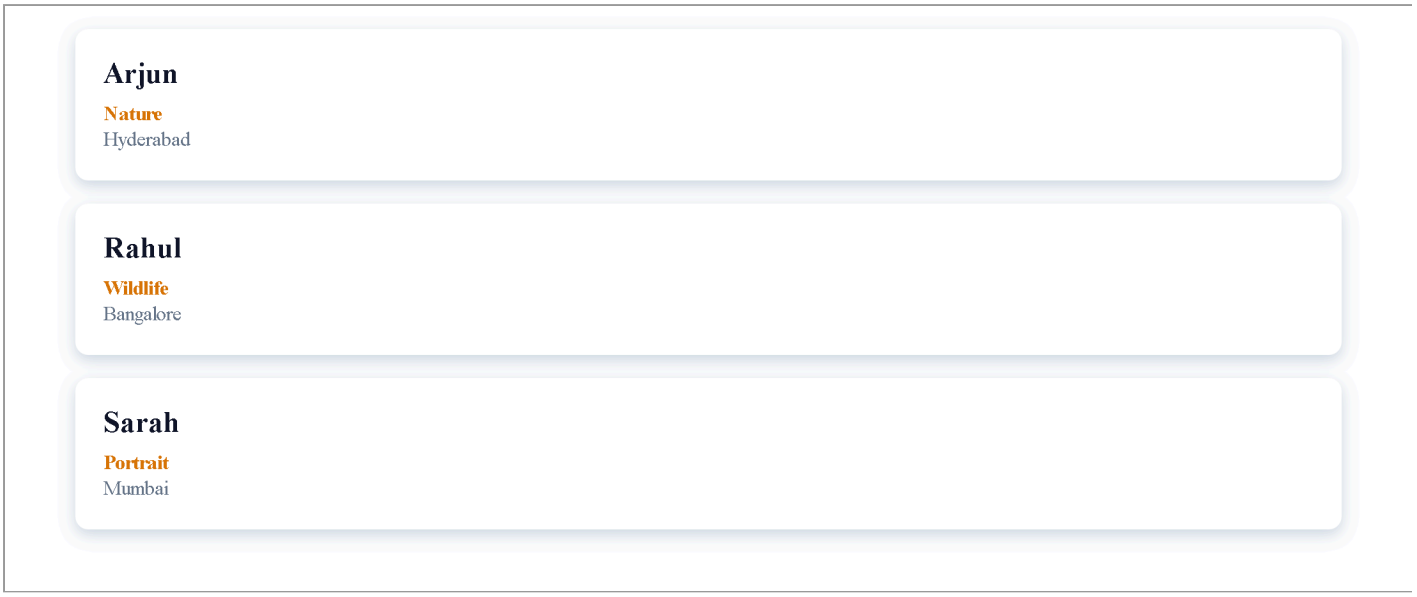

Output 5.2: Search filter applied — only matching photographs are displayed

Week 6 — XML and DTD

Write an XML file which displays the photographer information, and a Document Type Definition (DTD) to validate the XML file.

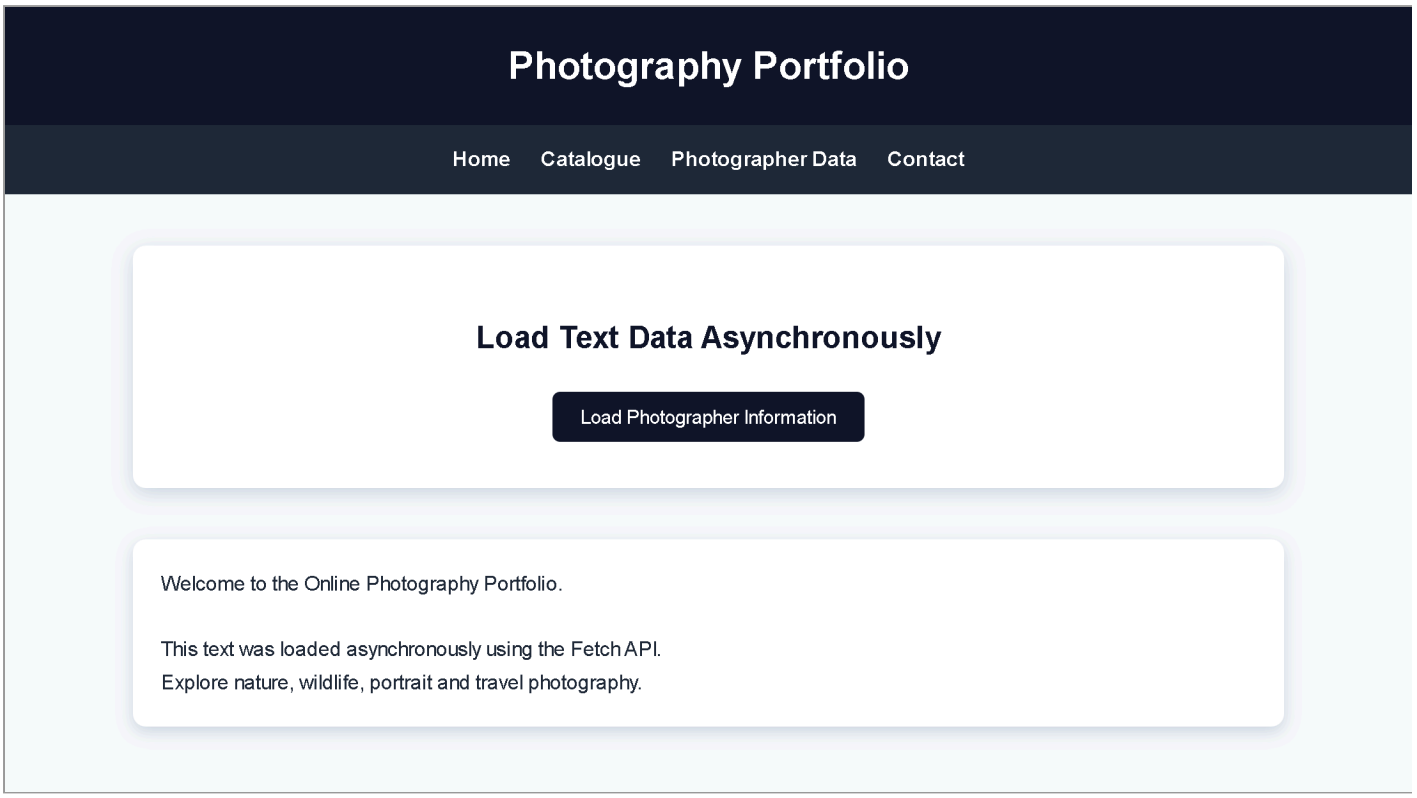

Output 6.1: photographers.xml displayed in the browser

Week 8 — Load Text Data Asynchronously

Write an Ajax / Fetch API program to load text data asynchronously.

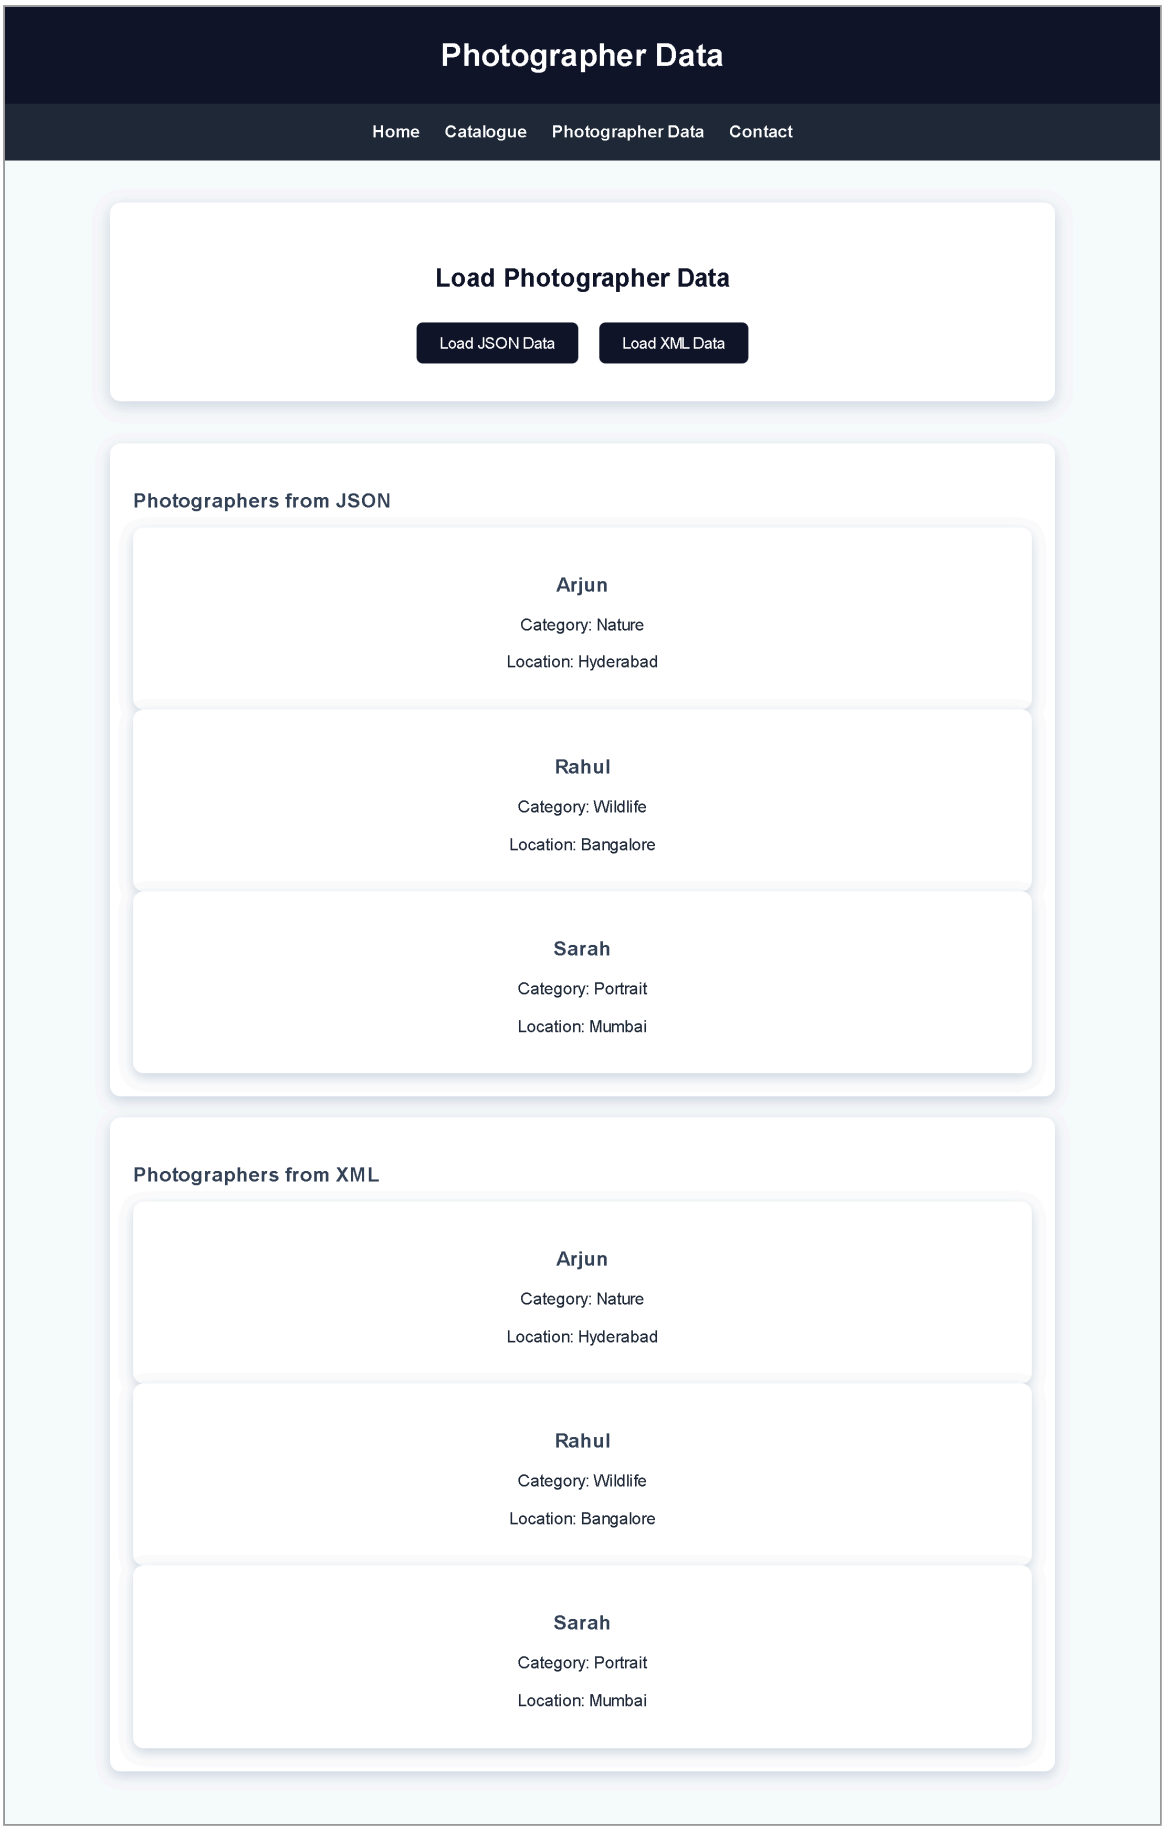

Output 8.1: Contents of message.txt loaded with the Fetch API on button click

Week 9 — Parse JSON / XML Response

Write an Ajax / Fetch API program to parse JSON/XML response data.

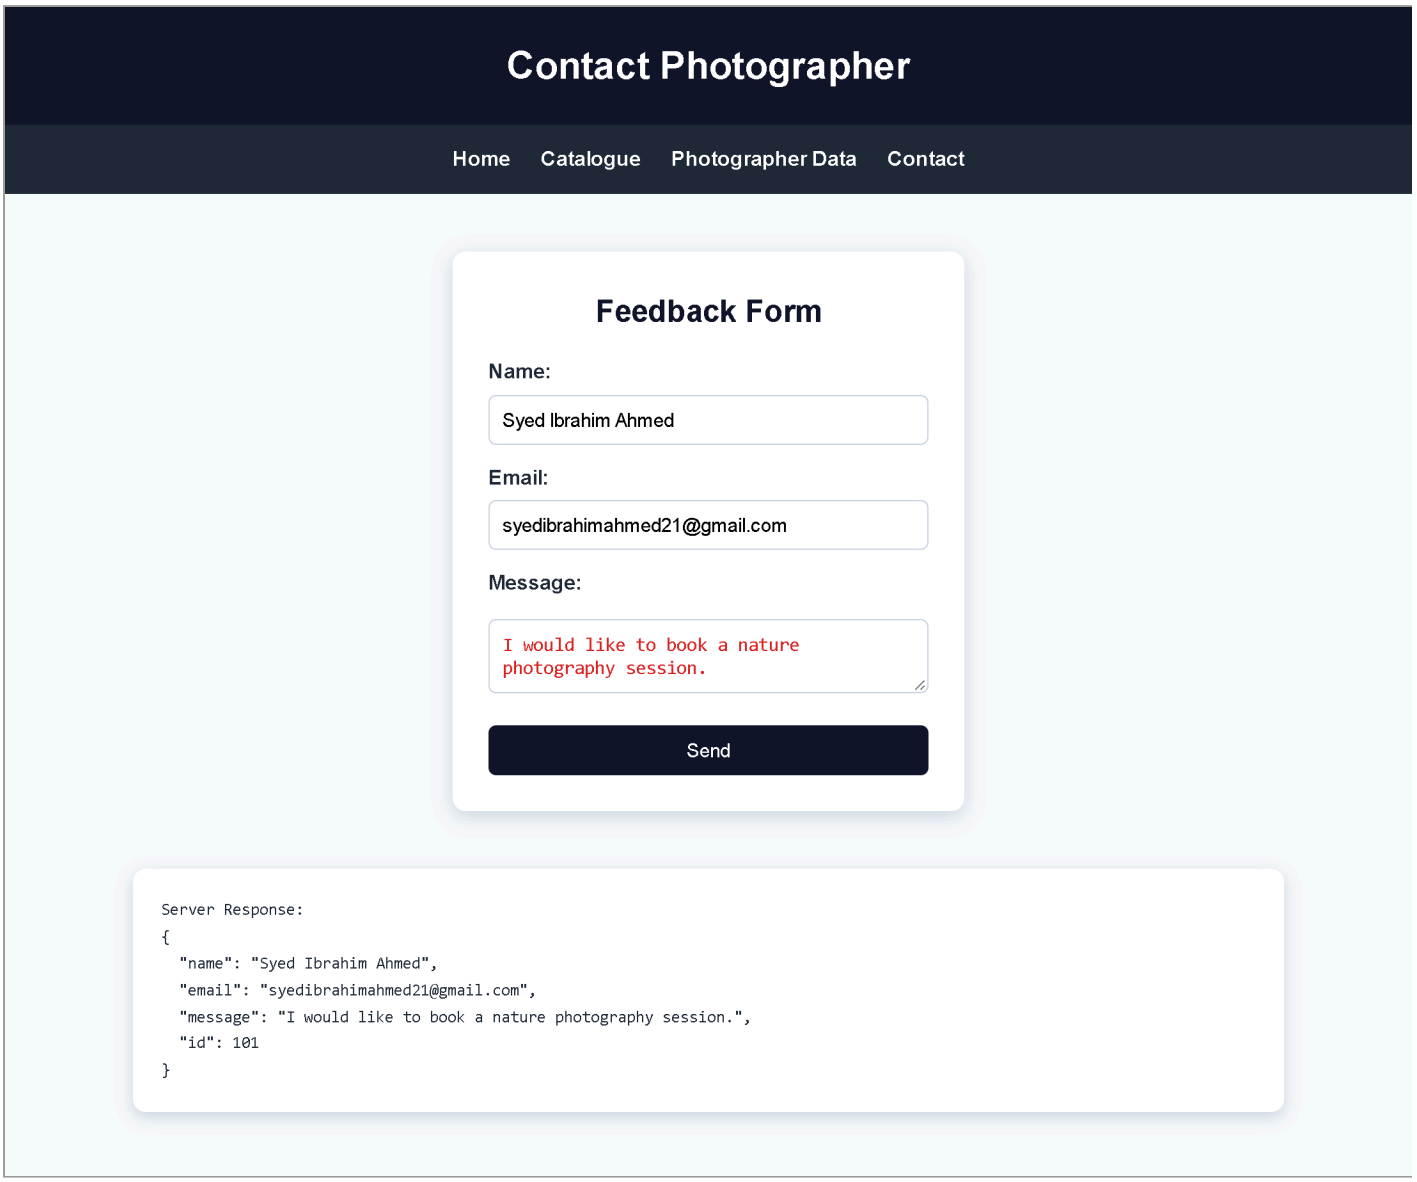

Output 9.1: Photographer records parsed from photographers.json and photographers.xml

Week 10 — Send Data using POST

Write an Ajax / Fetch program to send data using the POST method.

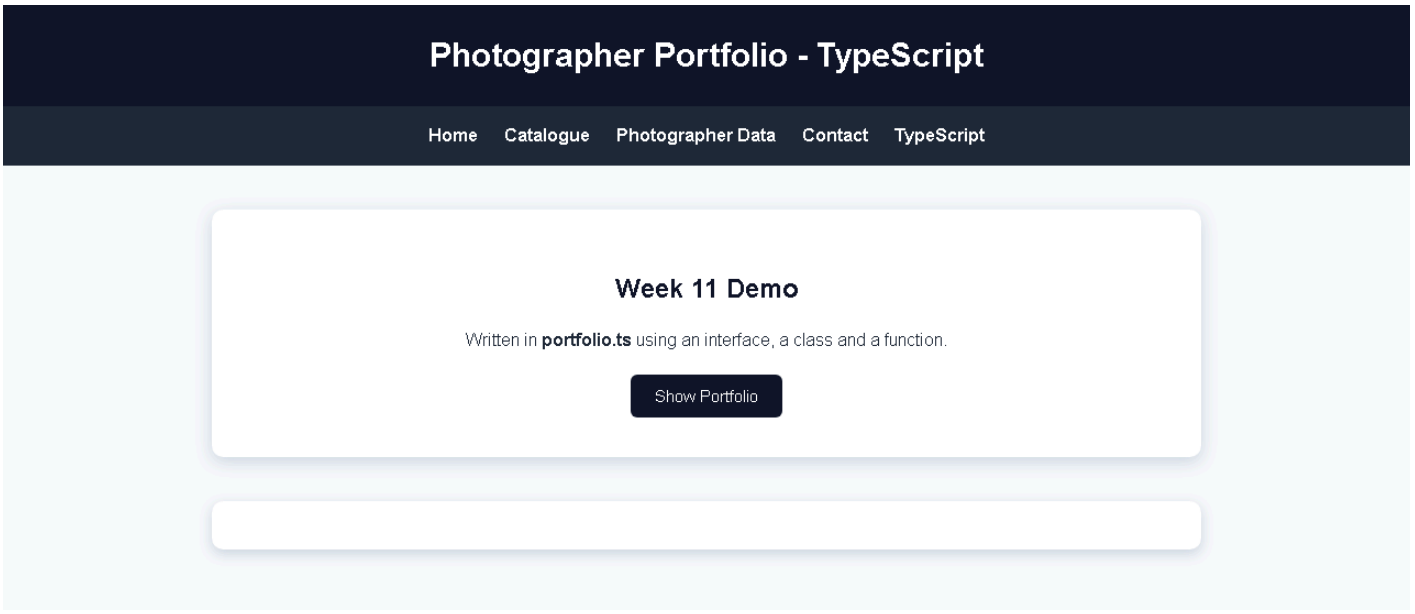

Output 10.1: Feedback form submitted with POST and the server response displayed

Week 11 · TypeScript Program

Develop TypeScript programs using classes, interfaces and functions.

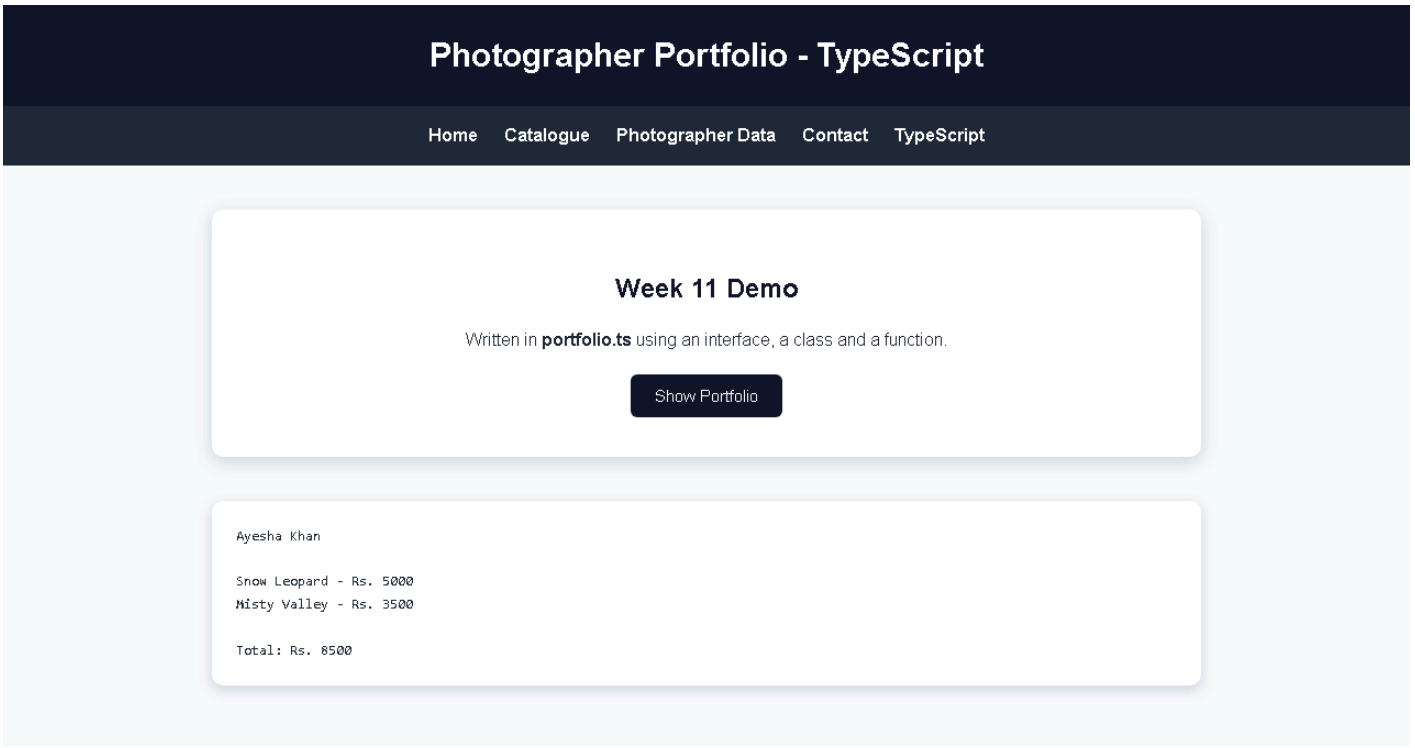

Output 11.1: TypeScript page (typescript.html) loaded in the browser

Week 11 · TypeScript Program

Develop TypeScript programs using classes, interfaces and functions.

Output 11.2: Show Portfolio clicked · output produced by the compiled portfolio.js

Week 12 · Angular Components

Create Angular components and implement data binding, directives.

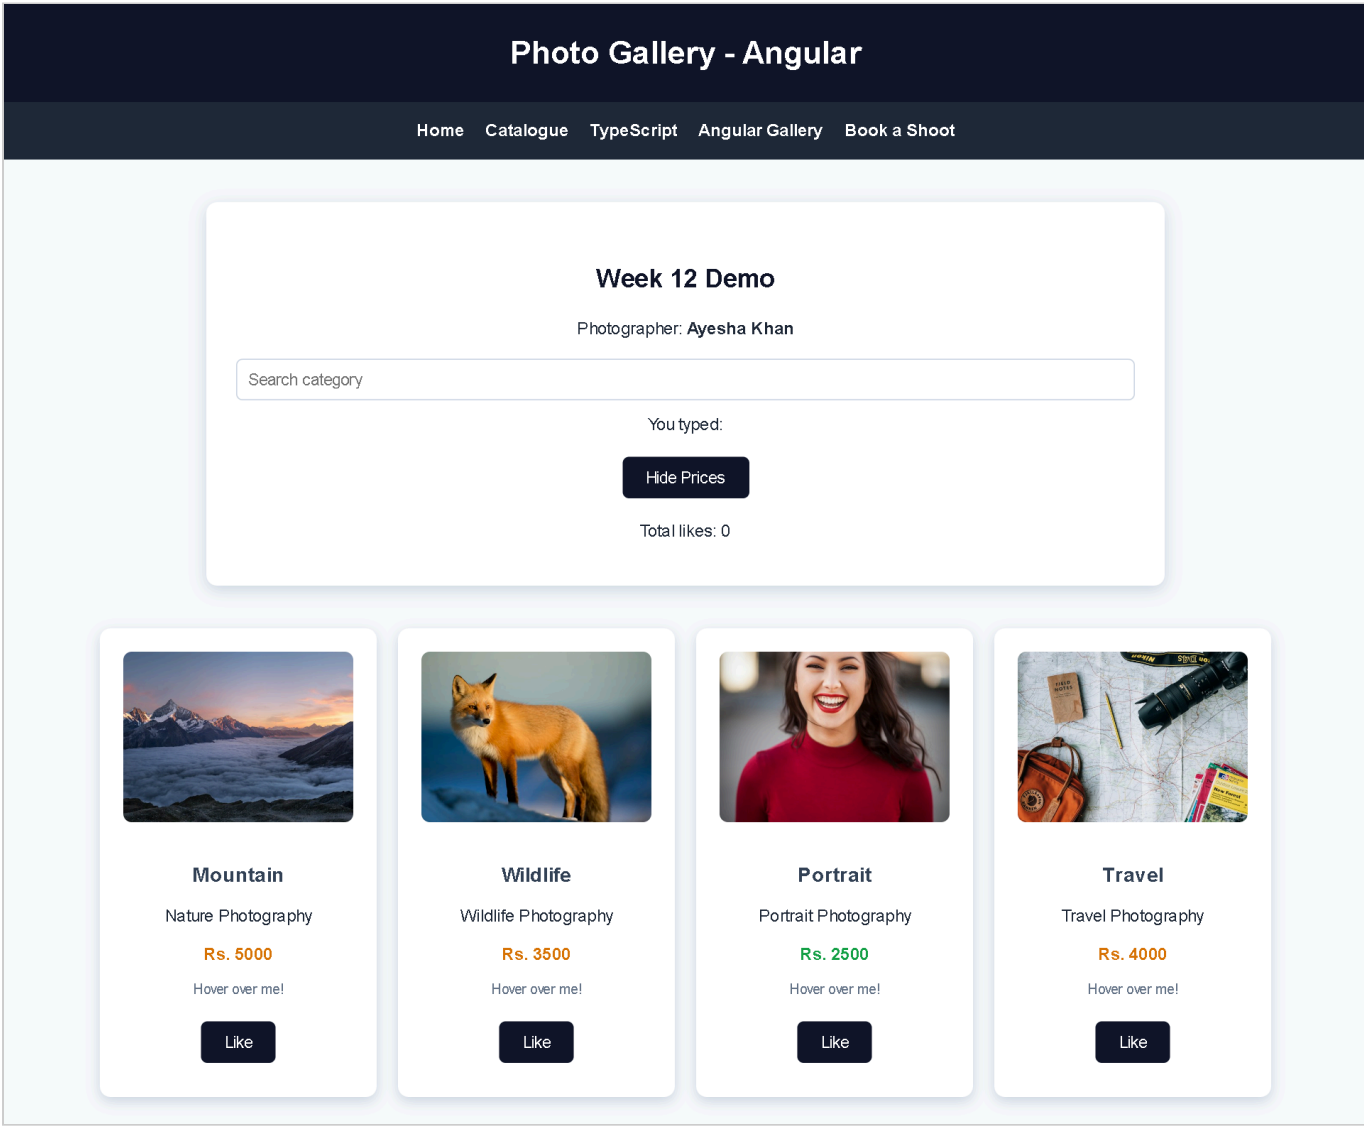

Output 12.1: Home page (week_1/home.html) with the new Angular Gallery and Book a Shoot links in the menu

Week 12 · Angular Components

Create Angular components and implement data binding, directives.

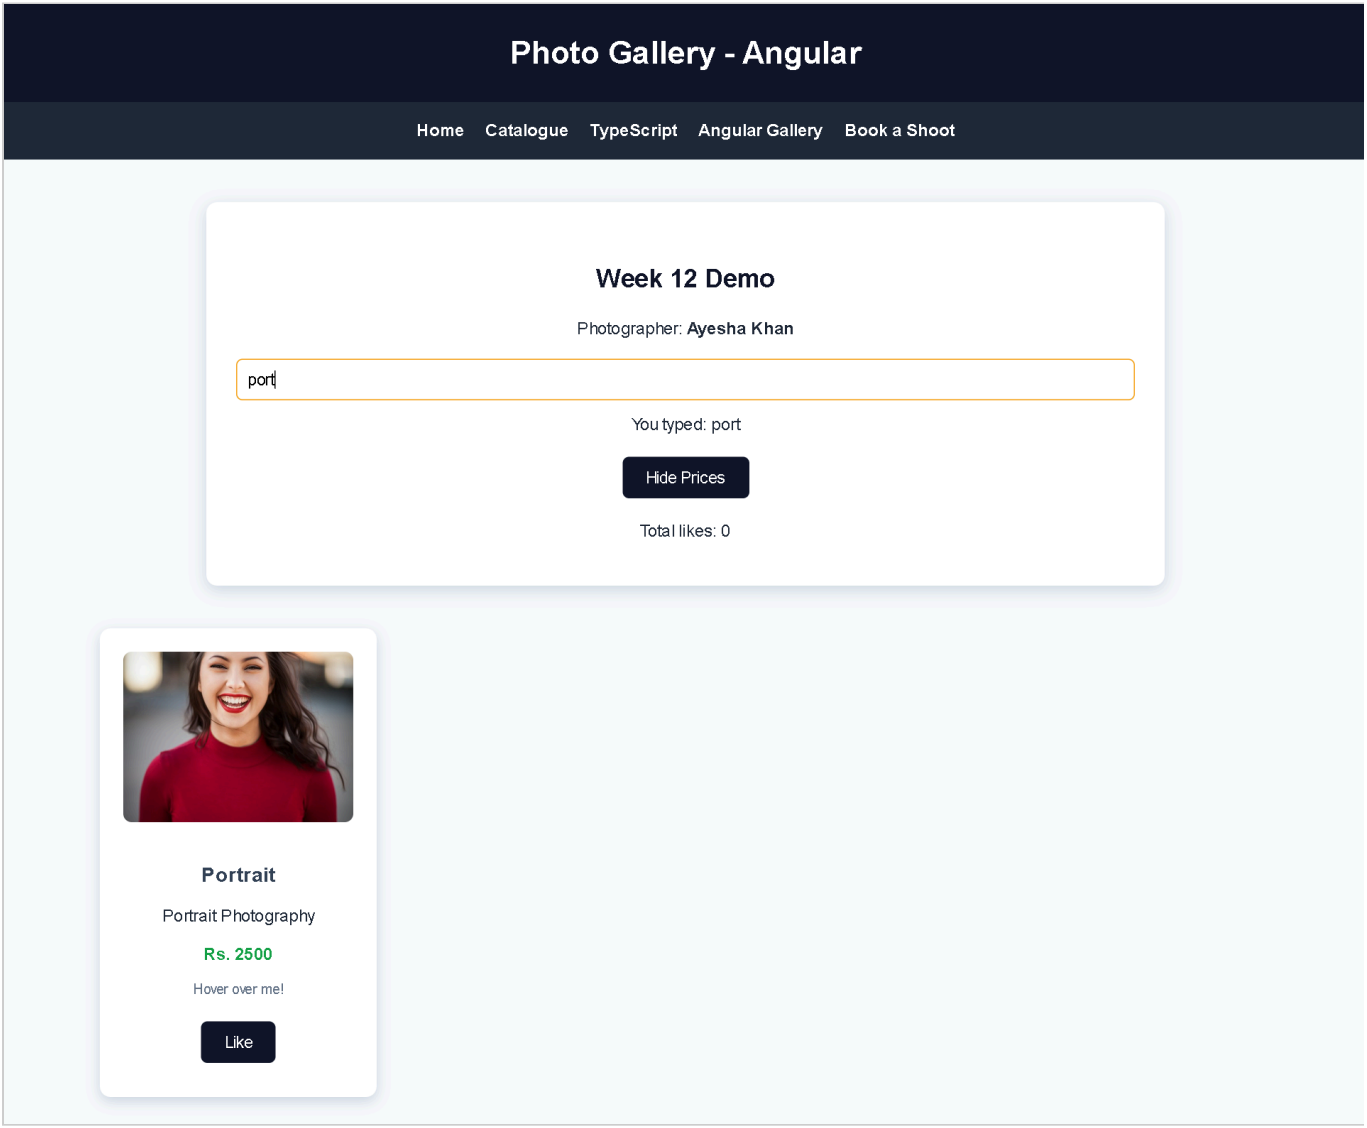

*Output 12.2: Angular Gallery loaded · AppComponent shows four PhotoCardComponents using *ngFor and property binding*

Week 12 · Angular Components

Create Angular components and implement data binding, directives.

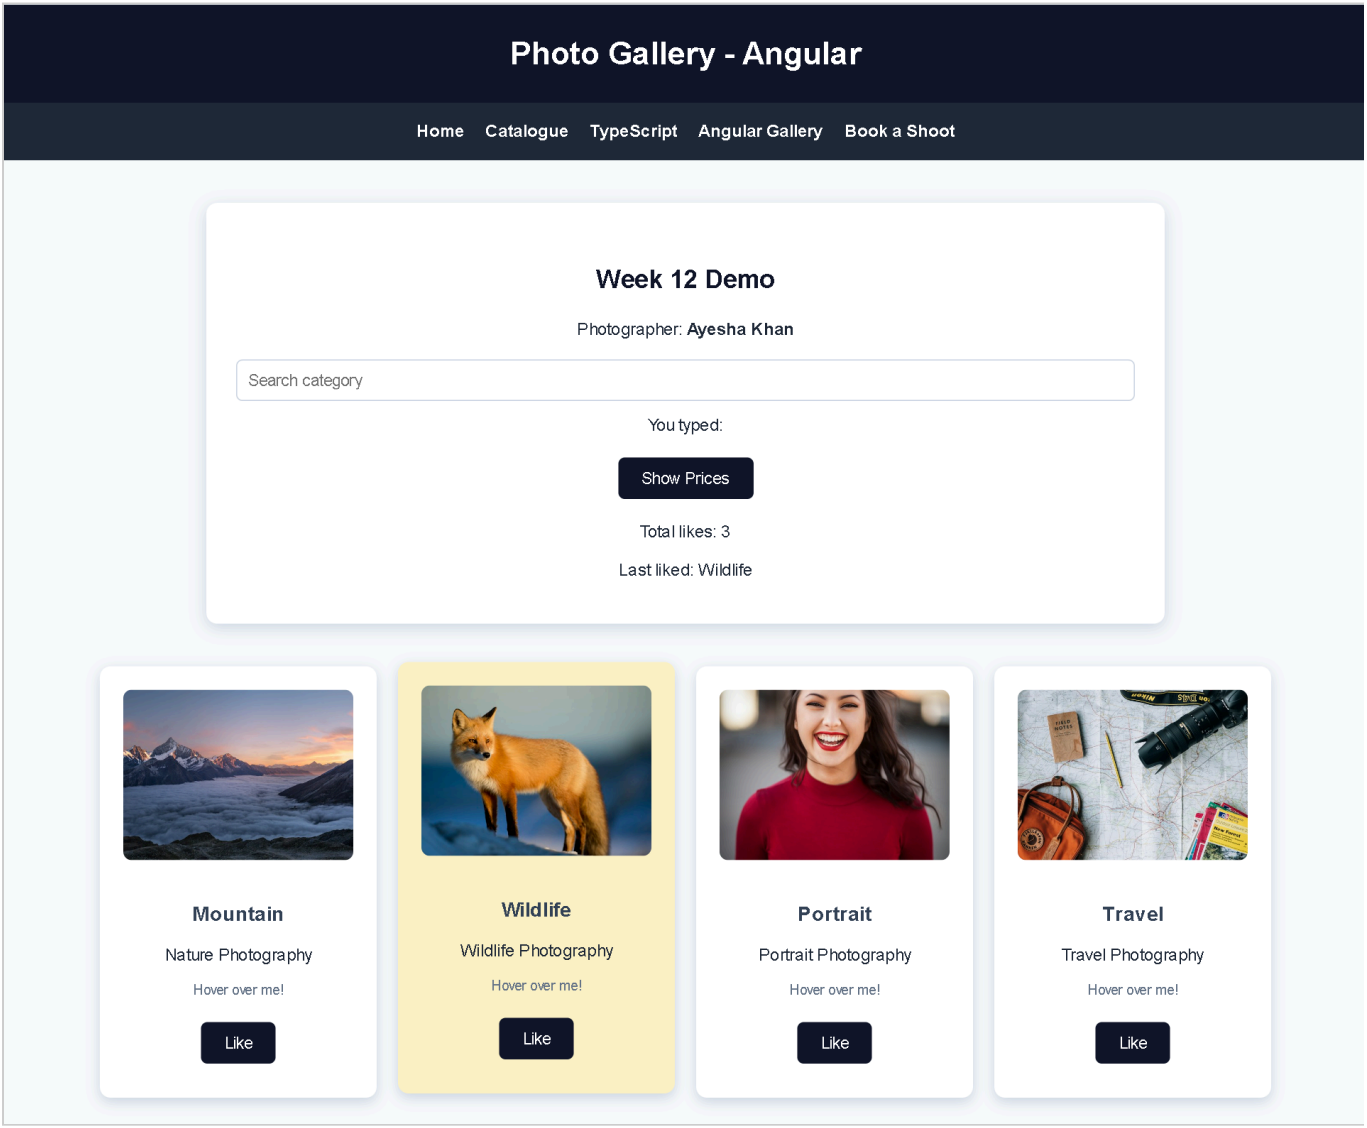

Output 12.3: Typing “port” in the search box · two-way binding [(ngModel)] filters the photos and updates “You typed”

Week 12 · Angular Components

Create Angular components and implement data binding, directives.

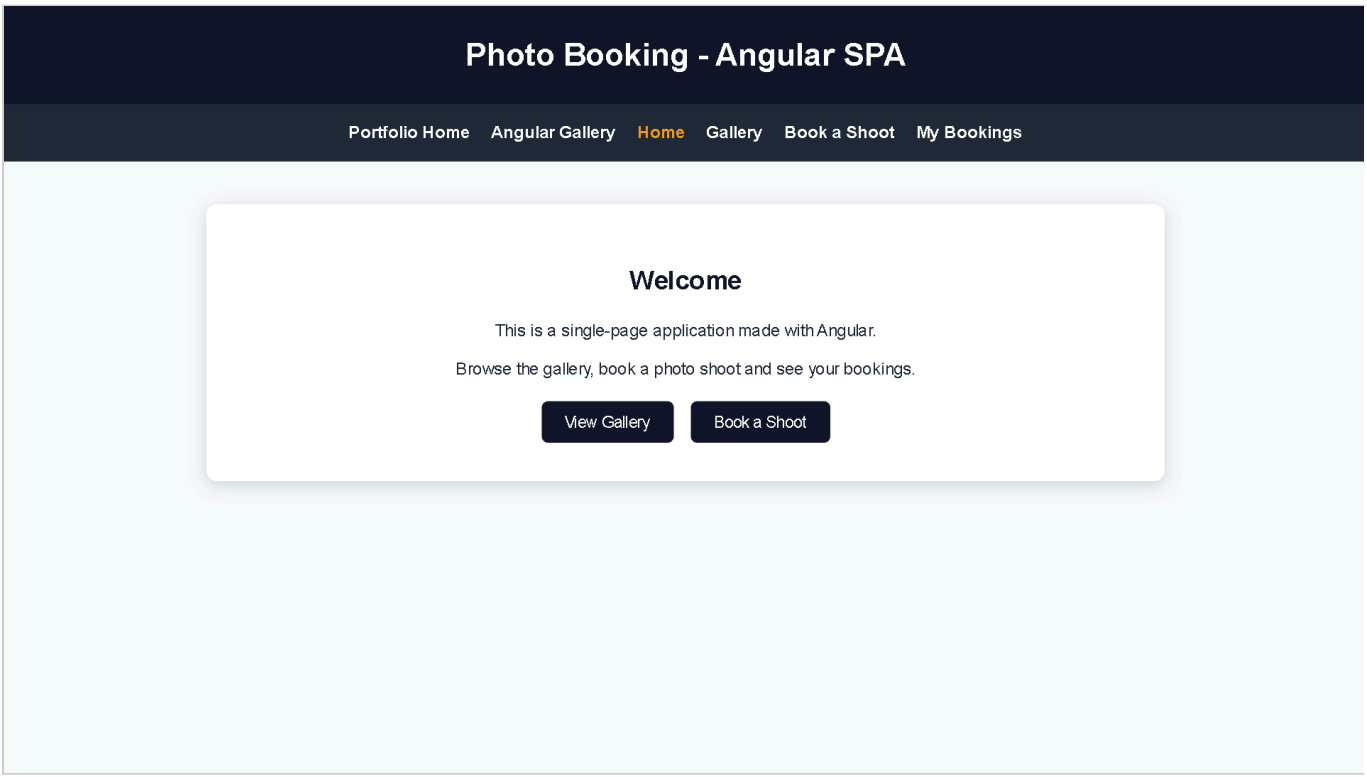

*Output 12.4: Like clicked 3 times and Hide Prices clicked · (click) event binding, @Output event, *ngIf, and the appHighlight directive on hover*

Week 13-14 · Angular Forms, Routing and Services

Develop Angular forms, routing, and services for a sample single-page application.

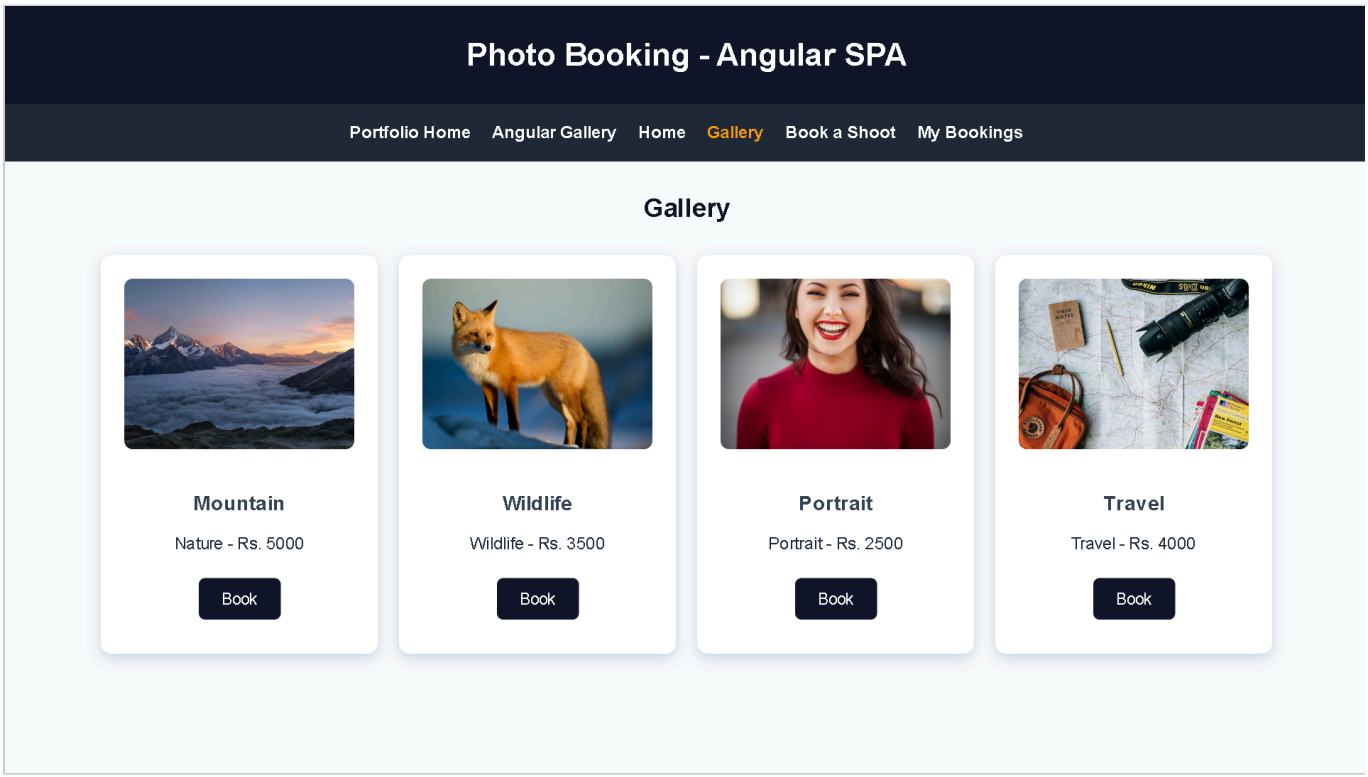

Output 13.1: Single-page app Home route (#/) shown inside <router-outlet>

Week 13-14 · Angular Forms, Routing and Services

Develop Angular forms, routing, and services for a sample single-page application.

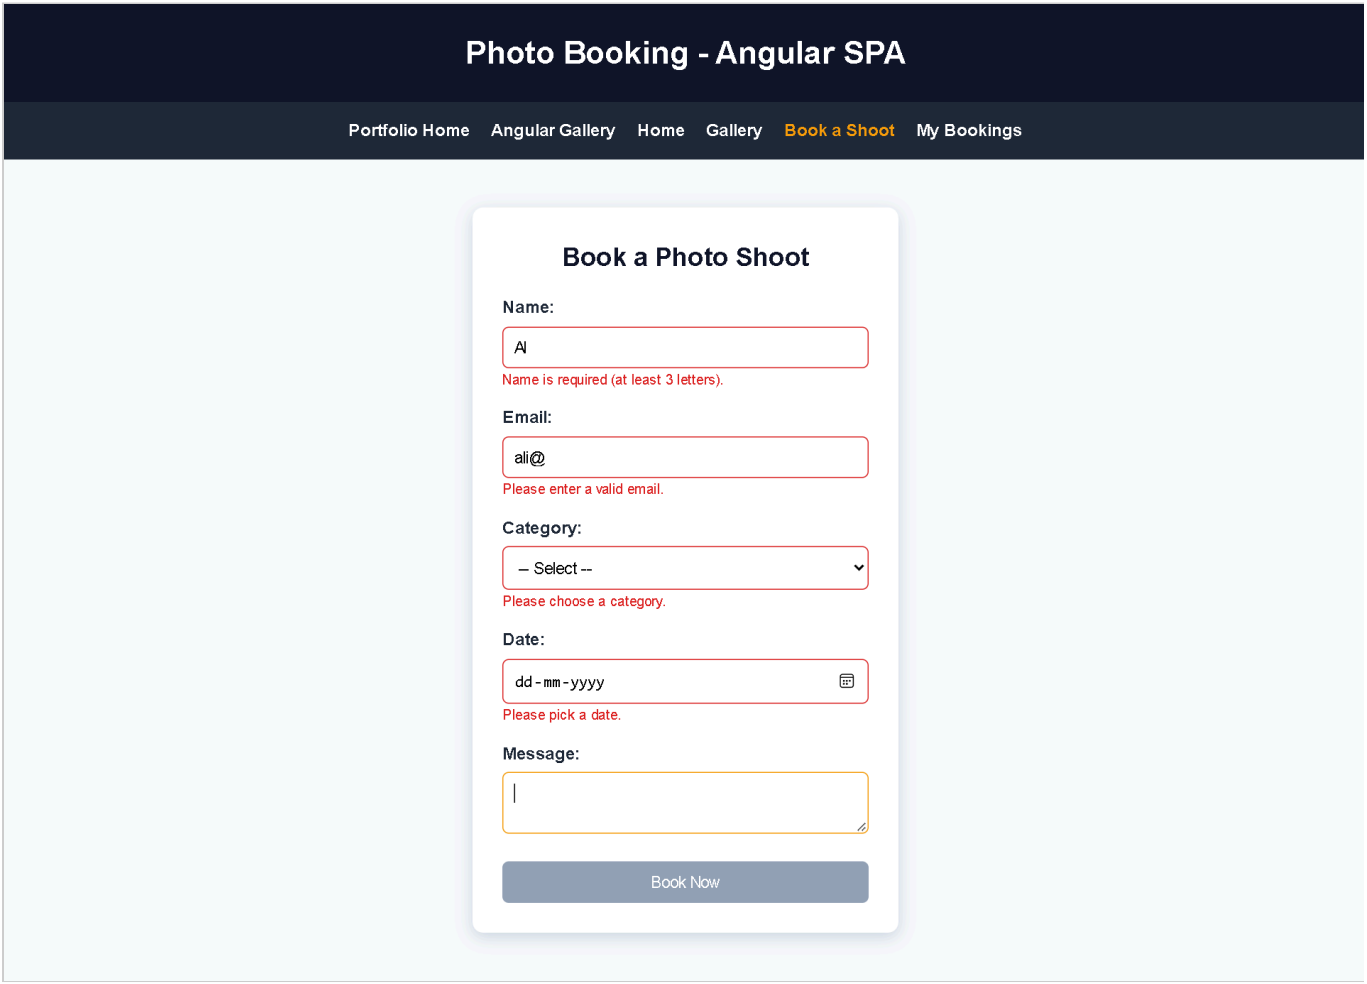

Output 13.2: Gallery route (#/gallery) · photos come from PhotoService

Week 13-14 · Angular Forms, Routing and Services

Develop Angular forms, routing, and services for a sample single-page application.

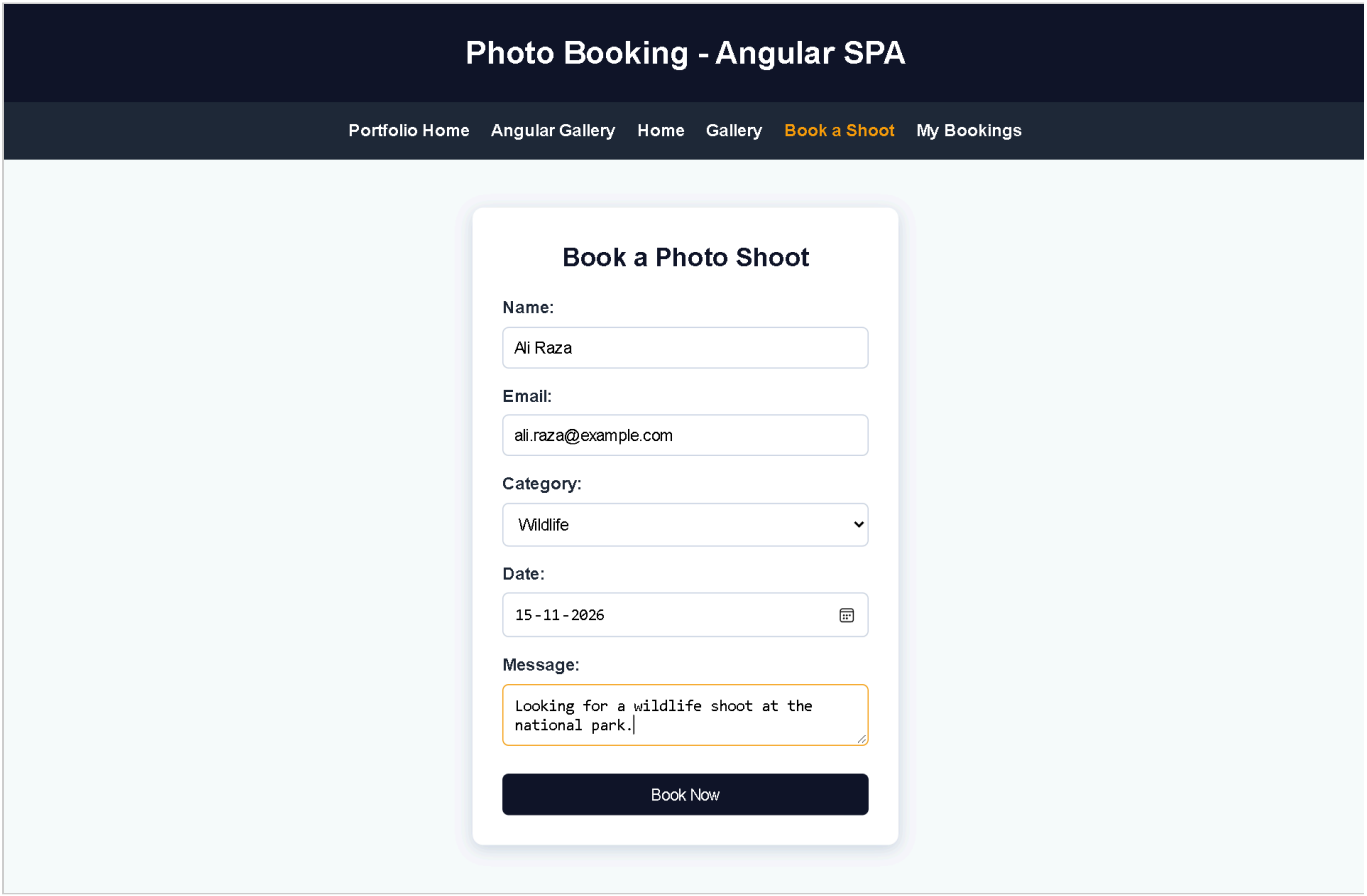

Output 13.3: Booking form with invalid data · template-driven validation messages shown and Book Now disabled

Week 13-14 · Angular Forms, Routing and Services

Develop Angular forms, routing, and services for a sample single-page application.

Output 13.4: Book clicked on the Wildlife photo · category pre-selected from the URL query parameter, all fields valid

Week 13-14 · Angular Forms, Routing and Services

Develop Angular forms, routing, and services for a sample single-page application.

Output 13.5: Book Now submitted · router navigates to #/bookings and BookingService shows the saved booking
